Communication + Education
in Lopez y Vicuña Gijón

I C O M M U N I C A T E , T H E N I E X I S T

An education programme of research and social and educational intervention orientated towards communicative and entrepreneurial skills

Circunference, sound wave; the centre of the circunference and its Radius forming a microphone. All of this has a double sense, «Squared Radio-Radius*», r^2 . More than a Radio, its a squared Radio.

**(the words radio and radius are written in the same way in Spanish)*

Who,
how,
where, when,
why...

The research

We have a radio station, we have resources... we have a lab. A radio station in an education centre is a privileged space for formation but also for research, analysis and reflection.

The timing

Timing is defined by the teaching load invested. The best investment... is education. The determined commitment of the institution for education and this project makes it possible to get short term results, although the path and the process are long.

Looking beyond

The resource reinforces the learning inherent in the intervention cycles and at the same time it improves the communicative, entrepreneurial and management skills...Not to mention the coexistence objectives, the relationship of the school community with the social and educational environment.

The idea

*I communicate then I exit!
We can intervene from the educational field to improve the communicative and entrepreneurial skills. We educate for the media, with the media.*

el objective

Investigate new models of social and educational intervention in the formal education, based on the social media and creating a radio station as a transversal and didactic resource at the service of the school community and within the education budget for the entrepreneurial movement, the development of communicative and coexistence skills.

be comfortable and listen carefully

Look at my hair

What is culture? You can look for answers and we give you the contents: music, sport, literature, cinema... and all of this taking into account the current affairs but without being overwhelmed by it. You better take a big comb to listen to this magazine.

Rmi connection

The *Rmi* world connected and sharing the adventure of educating worldwide. Interviews, news, interesting facts to be "superconnected". Adjust your radio helmets and be ready to travel through our institution.

On wheels

We are all pedestrians and many skaters, cyclers, drivers or lorry drivers with more wheels than microphones in our station. We want you to enjoy the road with safety and help you know better everything related to traffic. Start engines!!!

our radio shows are your radio shows

Squared health

We all know that if you don't win the lottery, at least it is important to be healthy. We think it is always important to be healthy. And we believe so that for us is squared health and be happy. Once a month we will greet you with health from our microphones.

Chip chip hurray!!

Science and technology until you drop. Our world moves at 29,8 km/s around the sun but that is nothing compared with the speed of science and technology. We will help you keep abreast in a funny way.

radioalcuadrado

squeeze the orange!

Our radio studios are your radio studios.

We are proud of our facilities, technical quality and a welcoming environment so that our radio family enjoys full-scale this quality resource.

When we broadcast live is as if all our listeners were here. That is why we take care of it in the way you care for the things you love. Welcome to our home, the home of Squared Radio. Do you put your radio helmets on? The microphones are open.

Our studio is a factory of emotions

In our project we all learn constantly. But for a radio station to go ahead team work is essential. Diversity of profiles and tasks, all coordinated to go "ON AIR".

To achieve good results we need specific formation from time to time and we have a plan to "recharge batteries".

We prepare for the production, direction and script... A radio team is like a well conducted orchestra in which everybody is necessary. Be in your posts... ready, steady, go!!!

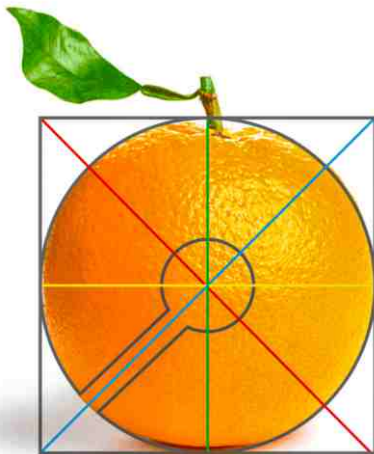

We prepare to be technicians. It would be impossible to go on air without the technicians who take care of sound systems, hardware and software. Everything ready to broadcast.

"A great power carries a great responsibility". And of course a microphone has it, that is why it is essential to continue training to be good communicators.
